Summary

As a blockchain full stack developer, I **designed** and **implemented** responsive websites and applications using modern web technologies, **enhancing** performance and user experience for decentralized platforms. **Revamped** interfaces with React.js and TypeScript, **boosted** code coverage with robust testing frameworks, and **streamlined** development processes, **resulting** in increased user engagement and efficiency

Skills

- Solidity
- Rust
- Move on Ethereum
- Polygon
- EVM
- Aptos
- Solana
- SUI
- Web3.js
- Ether.js
- Typescript
- React.js
- Next.js
- Vue.js
- TailwindCSS
- Figma
- Node.js
- Python
- Golang
- .NET
- MongoDB
- PostgreSQL
- RESTful API
- Sugraph
- Jira
- Kanban
- Git
- Communication

Experience

SENIOR FULL STACK DEVELOPER | 07/2023 - Current

freelancing site

- Designed and implemented custom validators and signature schemes to ensure secure asset transfer across chains, leveraging Solana's Phantom wallet integration and TON's TheGraph indexing service.
- Optimized transaction processing, achieving an average confirmation time of under 1.8 seconds for Solana transactions and 2.1 seconds for TON transactions.
- Implemented a unique multi-signature scheme that reduced gas costs by 55% compared to traditional bridges, resulting in significant cost savings for users.
- Utilized Rust for Solana smart contracts (leveraging Solana's Anchor framework version 0.32.0) and FunC for TON smart contracts (using TON's latest SDK v1.7.0), demonstrating proficiency in multiple languages and frameworks.

BLOCKCHAIN FULL STACK DEVELOPER | 02/2021 - 07/2023

Credit App - FL, US

- Developed smart contracts in Solidity to facilitate the buying, selling, and auctioning of NFTs on the platform, achieving 99% security and increasing transaction efficiency by 20%. Ensured adherence to industry standards for decentralized transactions, resulting in enhanced trust and reliability among users.
- Designed and launched interactive user interfaces using ReactJS, resulting in a 20% increase in user engagement metrics. Improved responsiveness and implemented effective state management strategies, directly contributing to higher user retention and satisfaction.
- Built integrations with third-party APIs, such as IPFS, Arweave, and Fleek, to enhance distributed storage solutions by 30%. Streamlined data management and retrieval processes, ensuring efficient and reliable performance for blockchain applications, and supporting scalable and robust solutions.

FRONTEND DEVELOPER | 05/2018 - 11/2020

YouApp - Kuala Lumpur, Malaysia

- Designed responsive websites from the ground up using modern web technologies to ensure optimal performance and user experience, specifically tailoring solutions for blockchain applications and decentralized platforms, achieving a minimum of 95% adherence to client requirements.
- Revamped front-end applications using React.js and TypeScript, enhancing accessibility features to encourage user engagement among diverse demographics. Led to a notable 15% increase in daily active users.
- Devised a unit testing architecture that boosted code coverage to 90%, resulting in a measurable decrease in legacy code maintenance time by 25 hours per month. Allowed for more efficient handling of upcoming development tasks and improved overall project turnaround times.

Education and Training

Sunway College - Kuala Lumpur, Malaysia | Computer Science

09/2017
